- **Frameworks and Libraries:** Selenium, Selenide, Appium, REST Assured, Cucumber-JVM, TestNG, JUnit, Extent reports.
- **Others:** Spring boot (basic), Jenkins (basic), JMeter, PostgreSQL.

› EXPERIENCE

Exadel, July 2020 – Present Middle Test Automation Engineer

Automated tests for ERP system of schools in the US

- Refactored and fixed ~40% of unstable tests.
- In regression test runs, analyzed ~200 tests and reported issues. Issues found by automation tests prevented the release of some missed bugs to production.
- Wrote SQL scripts to create test data for automation tests. It made automation tests data independent and stable.
- Reviewed the code of teammates. 1-2 PRs per day.
- Took the lead of the automation team for about 2 months. Processes were improved. The team focused on developing data-independent stable tests rather than fixing the hard-coded data and setting up the old tests in the new environment.
- Mentored a new hire.

Udevs, October 2019 – July 2020 Tester / Test Automation Engineer

Tested social media app

- Automated API tests with Postman. It speeded up release processes. The new version was released at least once a week.
- Automated end-to-end tests with Appium and Java. It allowed running tests on remote devices and helped to reproduce bugs that occurred only in specific mobile phones.
- Collaborated closely with the backend team and helped to find root causes of bugs by analyzing log files.
- Worked with android and iOS teams and contributed to the app's usability. Working closely allowed us to fix and retest bugs much faster. 5 to 10 bugs were fixed per day.

- Identified server operating limits by performing load tests using JMeter. Tests showed that the current state of the system would not handle the real-life use of the app.

’ EDUCATION

Westminster International University in Tashkent, 2017 – 2021
BSc in Business Information Systems

’ CERTIFICATIONS

- ISTQB Certified Tester Foundation Level (Credential ID 20-CTFL-01448-USA)
